

ABS Enhanced Mulch

Natural Plant Support and Weed Barrier

“Get more from your mulch”

Mulch Masters is proud to present **ABS Enhanced Mulch**. This product has been shown through scientific studies and field research to enhance and maintain plant health and conserve water while serving as an effective weed barrier.

By introducing our ABS organic nutrient package into the mulch colorant, we have developed an integrated plant support system, incorporating a proprietary blend of organic nutrients that are environmentally safe and approved by the USDA for organic crop production.

The special binders used in the colorant of the ABS Enriched Mulch and the cohesiveness of our nutrient package assures our amendments adhere to the cured wood and are activated by rain or irrigation to become a slow release organic nutrition medium for ornamental plants and landscapes.

This formulation is not a fertilizer, but it has been shown to benefit plants at ratios in the parts per billion, making our ground cover efficient and economical.

ABS Enhanced Mulch functions as a weed barrier while supporting plant health and water management measures so your landscape and ornamental plants look their best all season long. Available in all colors.

Your ABS Certified Distributor:
MULCH MASTERS INC.
230 Lee Rd. Jacksonville Fl. 32225
904-727-1100

ABS is backed by over 50 years of scientific research
